PROFOUND: A Non-Surgical Neck Lift

Profound is a radiofrequency treatment for skin tightening.

Whether you've lost weight, spend too much time looking at your phone or it's just gravity's affect on your body, you may want to investigate one of the newest technologies on the market for lifting and tightening loose skin... it's called **Profound Lift**.

As an alternative to surgery, fillers, or toxins, you can erase the loose, sagging skin under the neck and jowls with **PROFOUND**, an energy-based facial treatment that creates new elastin, collagen, and hyaluronic acid to firm and tone aging skin.

How it works: PROFOUND carefully heats the skin's elastin and collagen to an exact temperature for an exact amount of time. The result: the creation of new elastin and collagen to repair aging skin. In clinical studies, treatment had 100% response rate for wrinkles and 95% response rate for skin laxity.

The results: Most patients see improvement in 6-8 weeks, and results get even better for 3 to 6 months as collagen and elastin continue to develop. Studies have shown that the Profound procedure produces one-third the effect of a surgical face-lift.

The details: You only need one treatment in a physician's office, and it takes just 45 minutes or less. There may be minor redness, swelling, or bruising, but you can cover it with makeup and return to normal activities the next day.
